

# DAY OF DEFEAT

WHITE PAPER V2, 2023.

# PREFACE

# DOD

## AS WE KNOW IT

■ **\$DOD** was the first of its kind; a radical social experiment with a radical deflationary model, this deflationary model kept the price of **\$DOD** continuously rising with manual and automatic burns. **\$DOD** is different from other deflationary tokens, as it is not only given the starting price of the token but also the final price once the mission has been completed. It is called the “**Day of Defeat**”, because at the end of the game theory, the ultimate holder of **\$DOD** has become victorious and has defeated time and the natural human tendency of selling for gratification. The ultimate prize is released from the prize pool fund paid out specifically in BUSD and claimed by the remaining holders. ■

## 10,000,000X PRICE INCREASE

**\$DOD** is a **decentralized digital asset** originating on the **Binance Smart Chain** with a destruction mechanism. The total supply at launch was 100 trillion and will be left at a remaining supply of 1 billion and have a final prize pool value of 100,000,000 **BUSD** in the end.

The prize pool fund was specifically controlled by the smart contract and had no manual interaction; this **wallet was locked** until it is initiated automatically by the smart contract; **the private key was destroyed**. No one on the development team had access to the prize pool fund. The prize pool fund is to be opened by the smart contract when the balance reaches **100,000,000 BUSD**. Then the ultimate holders of **\$DOD** can exchange their **\$DOD** holdings for the prize pool **BUSD**.

The exchange ratio will be **10 DOD:1 BUSD** (or 1 DOD:0.1 BUSD). By delaying gratification and holding **\$DOD** till its end, you are rewarded by accessing the prize pool. At the end of the contract, **\$DOD** has increased by approximately **2,300,000x** from the initial pre-sale price. The constant **burning** was designed to create growing value time after time.

# \$DOD MODEL

# THE INTRODUCTION OF DOD 2.0

Understanding the flaws within the original design, a change had to be made to increase the security and overall performance of the smart contract. To best control the prize pool and increase the level of community involvement the **\$DOD** team decided to introduce the **DAO** controlled by **NFT** integration. With this new utility, the prize pool would effectively be protected by a second factor of authentication and allow the **\$DOD** holders to vote on major decisions that would benefit the overall ecosystem of **\$DOD**.

## BUSD & PAXOS

The new contract design was successfully launched but shortly after was met with roadblocks from **Binance and Paxos**. It was announced that BUSD would no longer be minted and eventually be phased out by **Paxos**.

Being that the **\$DOD prize pool** was designed exclusively to hold BUSD this became a major issue for the future of **\$DOD** and another change had to be made to ensure the **\$DOD** theory would successfully finish the way it was designed and not negatively affect its holders.

# THE INTRODUCTION OF \$LUSD

With uncertainty in the market, stable coins have become a high-risk market choice. What was once a safe vehicle to put your digital assets in, has now seen terrifying times of dollar de-pegging and other uncertainties. So how do we choose the proper stable coin to back **\$DOD** without worrying about the underlying risks? This is where **\$LUSD** is designed to mitigate risk and add utility to the **\$DOD** ecosystem with the ability to create added yield for holders and the ecosystem as whole.

# ALTERING THE GAME THEORY

With the introduction of the **DAO**, it was imperative that the team make adjustments to the overall game theory so that funds were not forever trapped but could be removed under certain circumstances that would be voted on by the **DAO**.

The following adjustments have been made: When any of the following three conditions are met, the prize pool will be triggered to start the voting mechanism.

## Triggering Condition

- When there is  $\geq 99,999,000$  **\$LUSD** in the prize pool.
- When the total remaining amount of **\$DOD**  $\leq 1,000,000,000$
- When the number of **\$DOD** burned  $\geq 99,999,000,000,000$

## \$DOD & \$LUSD

When one of the conditions of the prize pool has been met the **DAO** will be called to vote; if the voting passes, the exchange of **\$DOD** for **\$LUSD** will begin. As long as the **\$DOD** is transferred to the prize pool address, the prize pool will automatically transfer **\$LUSD** to the corresponding wallet address at the rate of 0.1 **\$LUSD/\$DOD**; the redemption period will be 90 days.

If none of the conditions above are met, the prize pool will be automatically triggered after **November 18, 2026**, to open the **DAO** voting mechanism. If the vote fails to pass to open the prize pool exchange, the game continues with no changes. If the vote is passed to open the prize pool exchange, the exchange will be opened at a conversion ratio that will be determined according to the amount of **\$DOD** held.

# HORIZONTAL EXPANSION OF THE \$DOD BRAND

## MISSION

We have seen massive gains in **\$DOD** on the **Binance Smart Chain** and we will be geared up to reach these highs again with the coming bull market. Hitting a **360-million-dollar** market cap in the V1 contract shows the community we have the power to push to these heights and with a new and improved ecosystem we hope to surpass our past accomplishments even quicker than before.

# HOW WE EXPAND

## ECOSYSTEM

The most successful franchises in the world grow horizontally to increase viewership of the brand, increase value and provide the same services everywhere there is a potential customer. **\$DOD** is using these same ideas to expand the ecosystem and bring awareness to the brand. The ability to **buy \$DOD on any chain** is the precursor to an ecosystem with continual growth. The integration of new blockchain technology allows projects like **\$DOD** to grow with the space.

## LAYER2 CHAINS

Normally tethered to the Binance Smart Chain due to the code size of **\$DOD** it becomes hard to expand on other chains due to high gas fees, but with the introduction of **Layer2 chains**, we see an opportunity to grow the **\$DOD** brand. **\$DODb** becomes the first candidate for this move to expand the ecosystem (additional information will be released by the team).

# TECHNICALS

■ TECHNICALS ■

# TOKEN

## DAY OF DEFEAT 2.0

**\$DOD** is the native token and main part of the ecosystem. Understanding the functions of the token is important for every holder as it ties into all of the project utilities.

## TOKEN STATS

---

### MAX TOKEN SUPPLY

100,000,000,000,000 \$DOD

### CURRENT CIRCULATING SUPPLY

34,553,651,617,764 \$DOD (August 2023)

### PRIZE VAULT BALANCE

172,000 \$LUSD (August 2023)

---

### TAX RATE AND DISTRIBUTION

19% on buy and sell. 4% of tokens are sold to \$BNB and forwarded to the marketing wallet. 1% is distributed to the referral rewards program (**DODref**), 1% to the staking rewards program (**DODstake**) and finally, 13% of tokens are then separated by the contract where half is immediately burned and the remaining half is sent to the \$LUSD treasury where it is swapped for \$LUSD and is then sent to the prize pool.

---

# \$DOD 2.0 MODEL

## ■ TECHNICALS ■

# NFT

### DAY OF DEFEAT NFT 2.0

The Day of Defeat **NFT** was created to enhance the security and utility of **\$DOD**. The **NFT** is designed to interact with the **DAO**. **NFT** will also be used for more utilities such as interacting with the **DEX** and providing additional yield or rewards for its holders.

## 3 TIERS OF NFTS IN THE DOD ECOSYSTEM

**TIER 1**

Lieutenant

**TIER 2**

Sergeant

**TIER 3**

Private

\*The Genesis collection currently in circulation are all Tier 1 NFTs.

## NFT STATS

### MAX NFT SUPPLY

∞

### CURRENT CIRCULATING SUPPLY

2,000 (August 2023)

### ORIGINAL MINTING FEE

0.2 \$BNB

### CURRENT FLOOR PRICE

0.5 \$BNB

With the launch of the new contract and the upgrade of the ecosystem, there will be more opportunities to mint \$DODNFT. So far the project team has only allowed one minting event since its inception where only 2,000 genesis NFTs were released to the public. These genesis NFTs currently control the operating DAO and will be eligible for revenue share created by the \$DOD ecosystem.

# YOUR NFTS CAN GIVE

## Ecosystem Decisions

Voting power over important ecosystem decisions (Tiers 1,2 and 3)

## Lock Release

Voting power over the lock release on the prize vault (Tiers 1,2 and 3)

## Create Proposition

Power to create a proposition for the **DAO** to vote on (Tier 1)

## Revenue Share

Ad revenue share provided by **DODdex** (Tier 1)

## Rewards

Staking and referral rewards booster (Tiers 1, 2 and 3)

\* There will be more opportunities in the future to mint a Tier 1 NFT.

# DAO

## ■ DECENTRALIZED AUTONOMOUS ORGANIZATION

DAOs operate on the principles of decentralization and autonomy, distributing **decision-making power** among all members and utilizing smart contracts to automate the process. The **DAO** was introduced into the ecosystem with the **DOD 2.0** upgrade to control many features that protect **\$DOD** holders.

## ■ TECHNICALS ■

# \$DOD DAO

The most important function controlled by the **DAO** is the prize vault. No matter the circumstances, the **DAO** will always have to vote on the proposition for the prize vault to be opened. In the current status of the ecosystem, a proposition is created by the project team and then executed solely by the holders of the **2,000 NFTs**. The team cannot make any major project changes without first sending to a vote including all **DAO** members.

## HOW THE DAO CURRENTLY OPERATES

- With the introduction of the **DAO** into the **\$DOD** ecosystem, the **NFT** collection was created. 2,000 **Genesis** pieces were minted and currently control the **DAO**. Major decisions and propositions will be set forth by the project team or **Lieutenant NFT** holders that will be voted on by all of the **DAO** members. We have recently seen this process successfully open the prize vault in the last token version to replace the \$BUSD with \$LUSD and upgrade the contract functions.

# DEX

## DOD DEX, A DECENTRALIZED SWAP PROTOCOL AND CHARTING

**DODdex** offers An intuitive and user-friendly interface to view charts and purchase tokens on the **Binance Smart Chain**. The trading process is simple and will soon offer limit orders and other functions traders are used to. Having a **DEX** that has a platform that can also be used for promotions and Ads will be a **major bonus** to the ecosystem and **NFT** holders that will share in its revenue.

# STAKE

## DOD STAKE, A DECENTRALIZED STAKING PROTOCOL FOR EARNING YIELD

Stake your **\$DOD** tokens to **earn additional yield** as you wait for the **Day of Defeat**, but beware of the penalties that you will incur for leaving your tokens left behind. **\$DOD** is built to end by its original game theory, so for this reason, the **DODstake** comes with a costly penalty if the rules are not followed. **1%** of all **\$DOD** transactions will feed the **DODstake** pool.

# REFERRAL

## DOD REF, A REWARDS PROGRAM FOR DECENTRALIZED MARKETING

**DODref** is a referral rewards system used for marketing **\$DOD** to encourage existing holders to refer new buyers. It is a form of word-of-mouth marketing that leverages the trust and influence of existing holders to attract new holders. The basic idea is to reward existing holders for successfully referring others, thereby creating a **win-win situation** for both the referrer and the referred individual. Previous holders have seen this model already introduced within the **\$DOD** ecosystem, but this is a new and improved version that will come with a higher rewards structure and also pay out more to **NFT** holders. 1% of all **\$DOD** transactions will feed the **DODref** pool.

## THE COMPLEXITY OF THE DOD REF REWARDS SYSTEM

The new structure of the rewards system is to work directly with **\$LUSD** to strengthen the prize pool. Purchasing **\$DOD** through **DODref** is much more different than purchasing from a **DEX** like **PancakeSwap**. When you buy from **DODref**, you will still be taxed the full **19%** tax, however, the funds that would normally go into the **PCS** liquidity pool will now go to purchase **\$LUSD** and strengthen the prize pool. The **\$DOD** team created this method with the intent to rapidly recover the status of the funds in the prize pool. Since the last exploit, we've seen **\$DOD** burned at a higher rate than it should have and the ratio needs to be corrected. This is a **major step forward** in correcting math to increase the success of **\$DOD**.
